Pain. LESS. One-touch, non-narcotic pain control.

The Empi Active™ is the first one-touch powered pain device designed to be worn comfortably under clothing.

Advanced electrotherapy for pain management

For over 30 years Empi, a DJO company, has been committed to developing pain management products that promote patient recovery and wellness. We know you're also committed to providing valuable and effective pain treatments that lead to positive patient outcomes.

The Empi Active™ is a next generation, non-narcotic, adjunctive electrotherapy treatment that empowers your patients to take control of their pain.

EMPOWERING YOUR PATIENTS

POSITIVE PATIENT OUTCOMES

Non-pharmaceutical pain control

Reduces dependency on pain medications

Easy to prescribe and self-fit application saves valuable time for you and your staff

Easy to use with one-touch to quickly relieve pain

Advanced, fast-acting, non-systemic pain control

Effective pain relief

Safe, simple pain control without the risks and costs associated with pharmaceuticals

Satisfied patient that can enjoy an active and productive lifestyle

Why Empi Active™ works

Patented SMP waveform

Empi Active utilizes a patented SMP waveform designed to maximize pain relief in two ways:

- Peripheral nerve stimulation results in neuromodulation at the spinal cord level through the gate control mechanism.
- The SMP waveform's ability to modulate between the low and high frequencies elicits the same pain relief mechanisms of actions as commonly prescribed opioid medications, but without the risks and side effects.

The advanced, fast-acting pain relief allows your patients to enjoy an active and productive lifestyle.

Empi Active was designed so it can be used with Empi's traditional electrodes or conductive garment.

Understanding the Next Generation in Electrotherapy

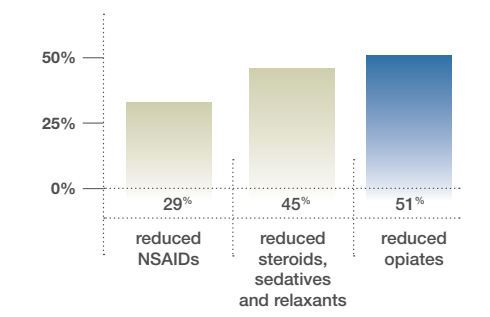

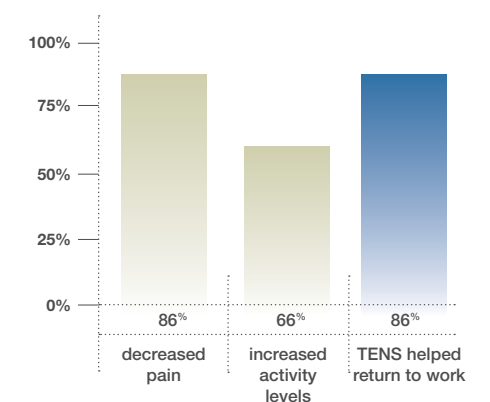

Electrotherapy is clinically proven to be effective

In a longitudinal study¹, 376 patients with chronic pain were interviewed after using electrotherapy for a minimum of six months.

Electrotherapy can reduce the need for prescription pain medications

While Empi Active may not completely replace prescription pain medications, studies have shown that in many cases, electrotherapy therapy may reduce the need for them.

After using electrotherapy for six months, participants in the study above reported a significant reduction in their medication use¹.

The next generation in electrotherapy, Empi Active reduces pain in two ways:

- Electrical impulses stimulate the peripheral nerves that convey information about touch and vibration. The signals from the stimulated nerves interfere with pain signals traveling to the brain, reducing the brain's perception of pain.
- Stimulation created by the Empi Active triggers endogenous opioids, which reduce pain through the same biological processes as prescription pain medications, but without the common, sometimes risky, side effects associated with pharmaceuticals.

1. All changes were statistically significant (<0.05): Fishbain, D.A., Chabal, C., Abbot, A., Wipparman-Heine, L., & Cutler, R. (1996). Transcutaneous electrical nerve stimulation (TENS) treatment outcome in long-term users. Clinical Journal of Pain, 12, 201-214.

Convenient, portable pain relief

Because it can be worn comfortably under clothing, the Empi Active is easy for patients to use at home and on the go. A simple self-fit application, the device is preprogrammed for optimal pain relief. Since it's non-narcotic, it will not interfere with your patient's daily activities.

Easy for you, your practice and patients

Empi is your partner every step of the way to ensure successful pain relief for your patients. You can focus on treating your patient's pain, and Empi will focus on all the necessary paperwork, which includes filing claims on your patient's behalf since most insurance plans cover the device. It's easy for you to prescribe, and our patient care representatives will provide ongoing support and patient education materials.

Empi's Medicare experts can also help your Medicare patients understand the required processes and forms to ensure coverage.

Empi Active is backed by Empi's 3 year warranty.

"I find the Empi Active to be helpful in treating my patients with back pain. Not only does it assist the patient in managing their symptoms, it gives them a sense of control in their medical management. I find that the device can be helpful in decreasing the amount of pain medications that a patient may take. I also find it very useful for patients who have difficulty tolerating usual medications such as muscle relaxants or non steroidal anti-inflammatories."
